

PAWPLANNER: A MOBILE APPLICATION FOR PET VACCINATION TRACKING

Abstract

“PawPlanner is a mobile application that helps pet owners **manage pet health records and vaccination schedules** through a centralized digital platform.”

Objectives

- To **study** the current challenges faced by Malaysian pet owners in managing pet vaccination records and through literature reviews and surveys
- To **develop** PawPlanner, a mobile application for a vaccination tracker.
- To **conduct** User Acceptance Testing (UAT) to evaluate user acceptance of the app.

Comparative Study

Feature	Literature Review	Existing Apps	Survey Findings	PawPlanner's Advantage
Centralised Vaccination Records	Haase (2025) – mHealth tools benefit from basic guidance features	11Pets, PetDesk store health data but lack Malaysian vaccine schedule	88% of respondents prefer a single platform for storing all vaccination records	Integrated vaccine record storage with QR code sharing for vets
AI Chatbot Guidance	Baskaran (2025) – AI chatbot improves client communication ; reduces admin workload	11Pets lacks AI, PetDesk has only FAQ search	81% value instant access to basic pet care advice	Built-in AI vet assistant for answering common pet health queries instantly
Vet Locator	Kreloses (2023) – Cloud-based records, automated reminders, regional workflow support	Early adoption of digital appointments and pet diaries	86% want an in-app feature to find nearby vets	Static vet locator with verified Malaysian clinic listings
Localisation & Accessibility	iVET PetCare (2021) – Early adoption of digital appointments and pet diaries	11Pets, PetDesk have English-only interfaces	79% prefer apps with local language options and simple UI	Designed for the Malaysian context with an accessible UI for less digitally literate users

Methodology

REVIEW

Collect feedback after each sprint to improve features & fix issues

PLAN

Gather requirements from pet owners; priorities features in backlog
Objective 1

DESIGN

Create a Figma wireframe with pets' profile, vaccine records, reminders & QR-code access

AGILE METHOD

DEPLOY

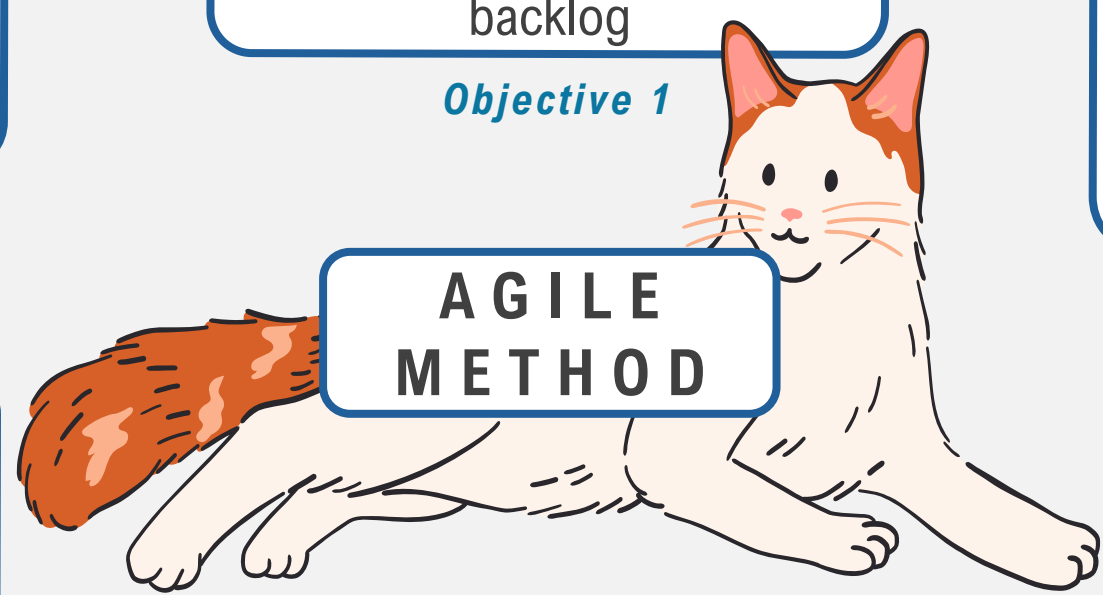

Set up backend API's, AI features & QR-code sharing

TEST

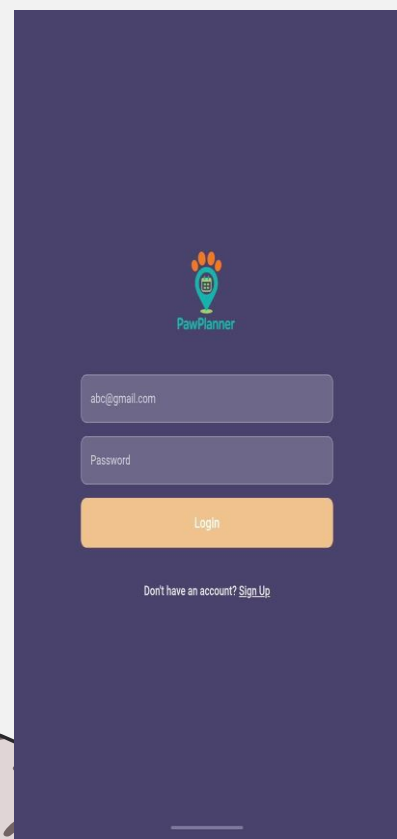

Conduct UAT to ensure functionality meets needs
Objective 3

DEVELOP

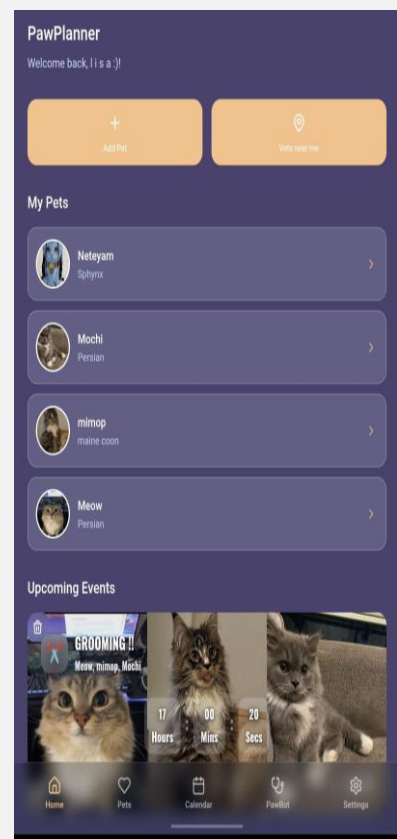

Build Features: GPS vet locator, AI-vet assistant, & pets profile management in sprints
Objective 2

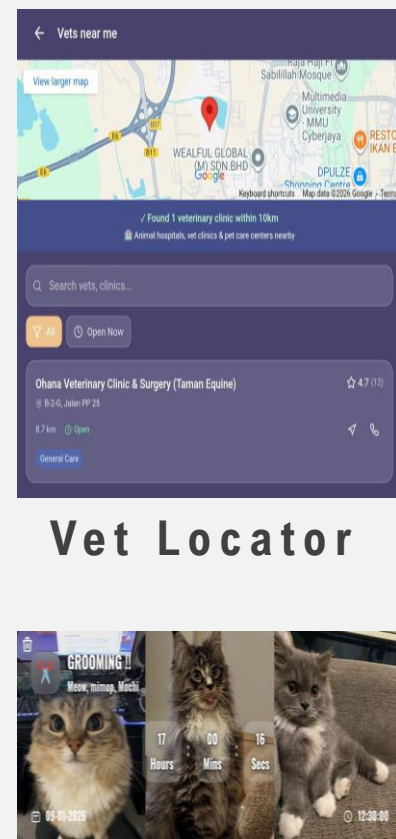

Design

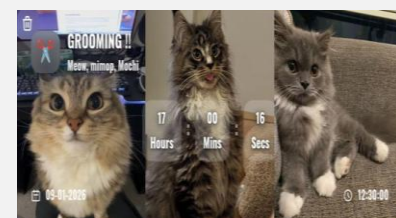

Login

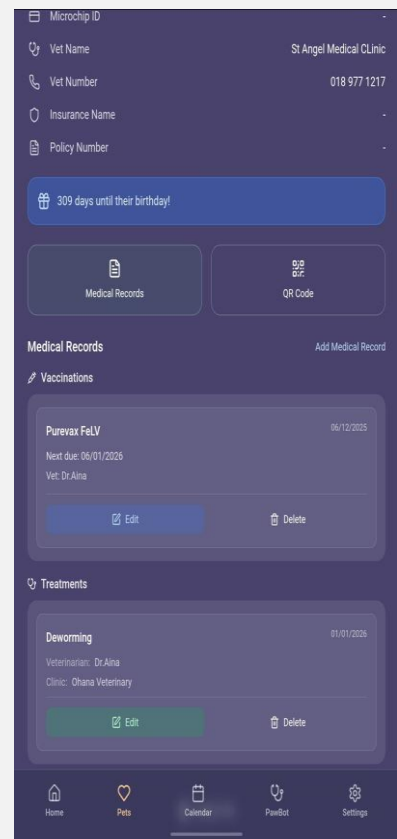

Dashboard

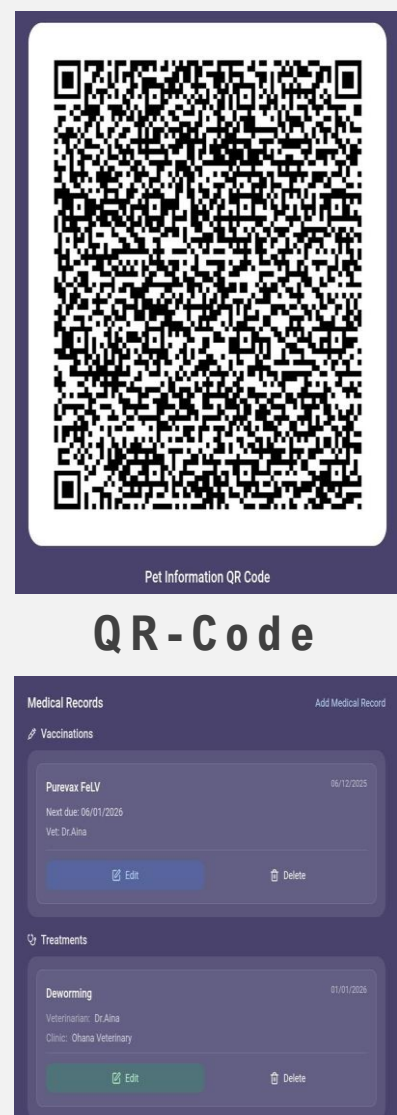

Vet Locator

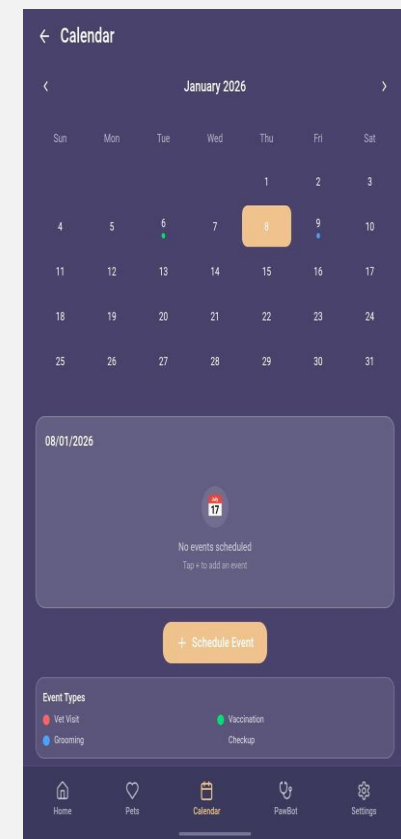

Event Countdown

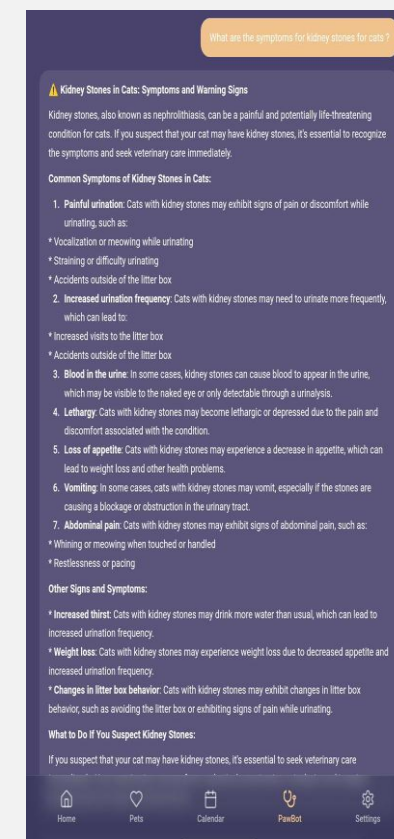

Pet Profile

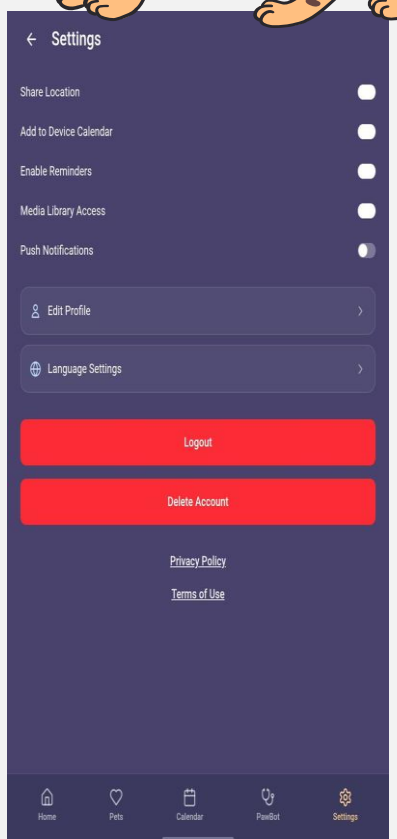

Medical Records

Calendar

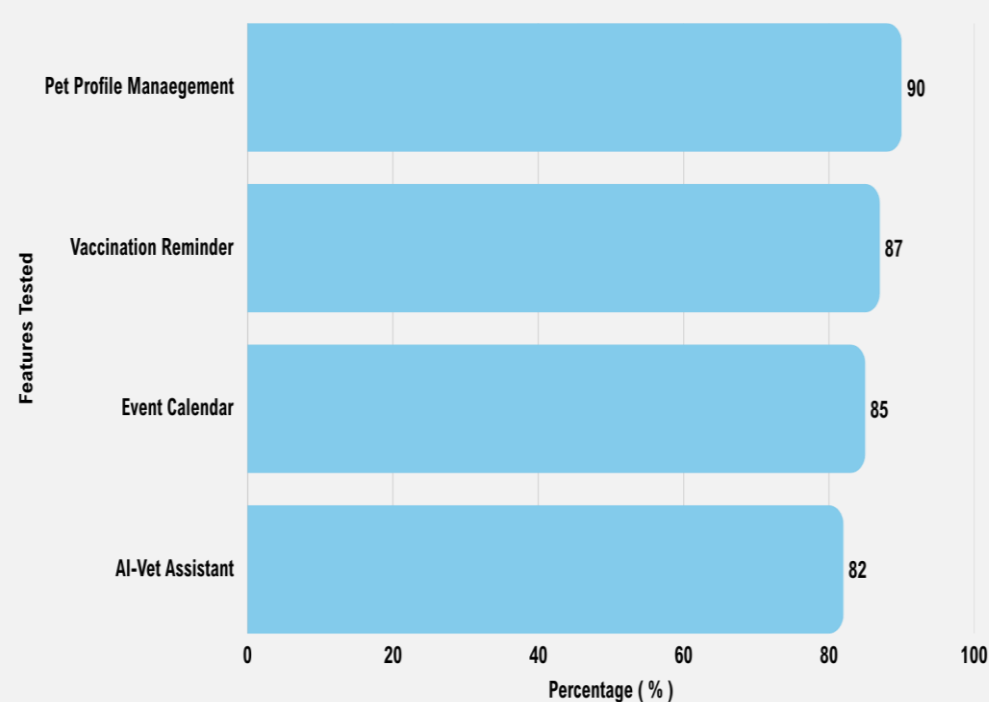

AI-Vet Assistant (PawBot)

Settings

Result

Feature Effectiveness

> 90% agreed - ☒ Pet profile management is simple and intuitive

> 85% agreed - Vaccination reminders are effective and helpful

> 85% agreed - Event calendar improves pet care scheduling

> 80% agreed - PawBot supports basic pet health guidance

Conclusion

“PawPlanner successfully supports pet owners in managing pet health records, vaccinations, and care activities through a simple and centralized mobile platform.”

Benefits for Pet Owners

- Easy-to-use interface for managing pet profiles
- Clear vaccination reminders reduce missed appointments
- Centralized medical records replace paper-based tracking

Missed Appointments ? Not Anymore.
