Qualitative Feedback

12. What did you like most about the myMove system? 15 responses

The QR code notification is a lifesaver. I hate leaving my phone number on the windshield because of privacy concerns, so scanning a QR to notify is a brilliant solution

Not having my phone number exposed is great

The app is very user-friendly. Navigating between registration, vehicle management, and spot booking is good

The user interface is very clean, modern, and easy to navigat

The Stripe payment flow was super smooth and secure.

I loved how fast the parking grid updated in the app during the sensor demonstration. Seeing real-time slot status in a clean interface makes finding parking so much easier.

live status update on the grid was great, impressive

I drive different cars to work depending on the day so register multiple vehicles in one profile is handy

The Stripe payment integration worked instantly in the demo

The double-parking notification feature solves a real daily campus problem without exposing any personal contact numbers.

liked the layout of the QR code generator

Other drivers do not need to download the myMove app just to scan my QR code and send a notification is extremely convenient

The SOS alert button is a nice for safety

Very clean UI design

The web scanner page opens really fast when scanning the QR code

Do you have any suggestions or features you would like to see in future updates of myMove?¹⁵ responses

Nope so far good

The SOS feature should allow adding custom emergency contacts like family or friends

Add an option to save favorite parking locations or regular slots for quicker booking next time.

Non everything is good

Would like to use QR Code payment or TNG GO

Please add a Bahasa Melayu translation option to make the app more accessible to local users who prefer Malay.

It would be helpful if the app suggested alternative parking spots

Can we pre-load money into a digital wallet in the app instead of entering credit card details every time?

A history section to track monthly parking expenses and download receipts for claims.

Maybe show a history log of all double-parking alerts

For the QR code, maybe provide a template to print it out as a neat windshield sticker directly from the app.

A toggle switch for light Mode would be a great addition to save battery and look cooler.

The ultrasonic sensors might get dirty outside in the rain. Maybe look into camera-based or magnetic loop sensors for the hardware after the prototype

provide a countdown timer on the main screen when a spot is booked

Allow users to report broken sensors or physical obstacles in slots directly through the app
