

SHESAFE: A Woman's Safety App: Integrated with AI

Abstract

SheSafe is a mobile application designed to enhance women's personal safety through real-time emergency features and proactive safety support. The application integrates SOS alerts, live location sharing, check-in systems, safe route mapping, and a community-based support feed. By combining technology and user-centered design, SheSafe aims to provide women with a reliable and accessible safety companion in daily life.

Objectives

To study existing mobile applications for women's safety features

To develop a mobile application that enhances the safety of women by providing a reliable app that can be used during threatening situations.

To evaluate whether modern technology is being implemented to strengthen the app's reliability in ensuring women's safety.

Methodology

Design

Comparative Study

Existing Safety Apps Limitation	SheSafe Advantages
Fragmented safety features	All-in-one safety platform
Limited personalization	Real-time SOS and location sharing
Poor user engagement	Structured check-in system
Privacy and usability concerns	Community feed and AI safety tips

Result & Conclusion

High user satisfaction with SOS and location sharing features

Users expressed increased sense of personal safety

Positive feedback on check-in system and emergency contacts & Majority of users found the app easy to use and reliable

SheSafe successfully addresses women's personal safety needs by integrating emergency response, location tracking, and community support into a single mobile platform. The application promotes confidence, awareness, and quick response during critical situations through a user-centered and secure design approach.
