University Malaysia of Computer Science & Engineering (UNIMY)

1. Search & Reserve → 2. Real-Time IoT → 3. Stripe Checkout → 4. Privacy QR Chat

Why myMove?

❌ SEARCH PARKING LOOP

Drivers endlessly circle crowded parking structures without real-time vacancy visibility, causing severe traffic congestion, wasted fuel, and lost time.

❌ DOUBLE-PARKING

Blocked drivers have no secure contact method. Leaving phone numbers on dashboards exposes vehicle owners to privacy leaks, scams, and unsolicited harassment

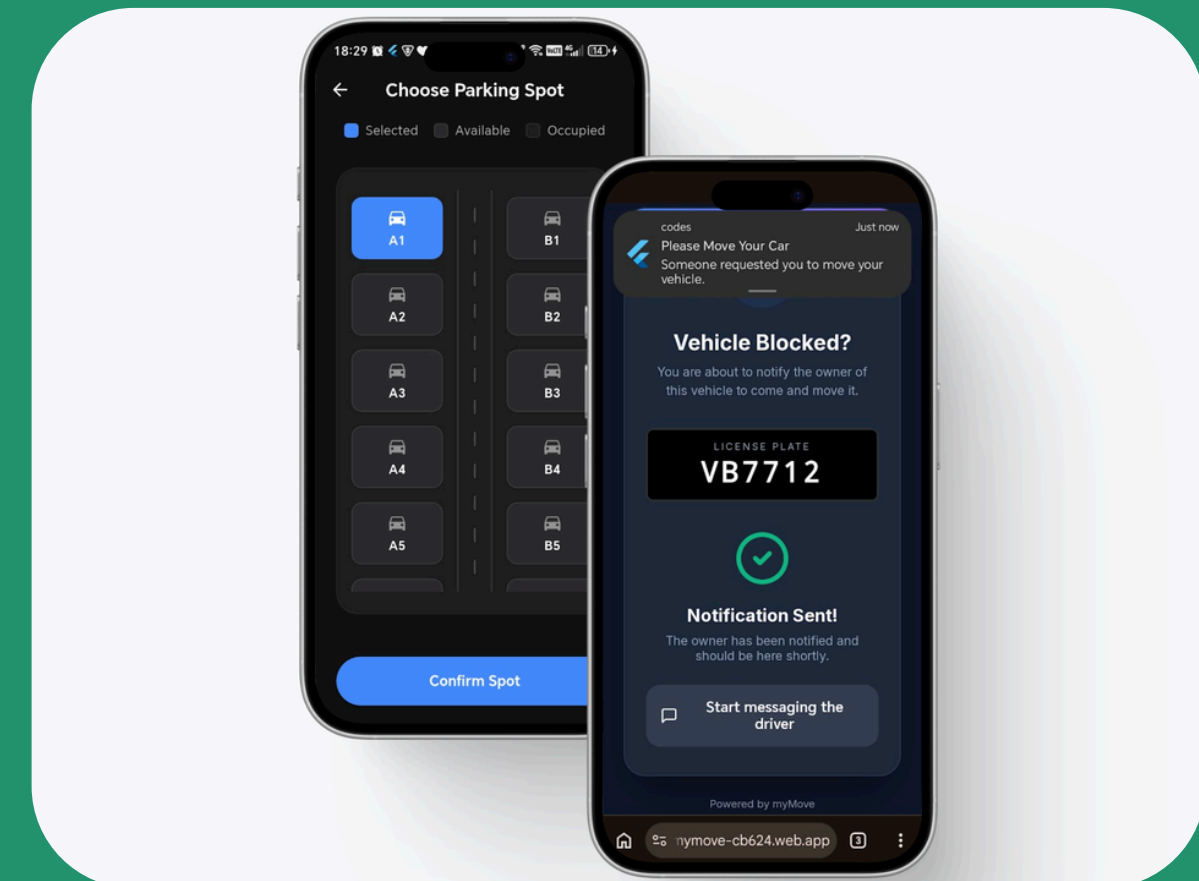

❌ LEGACY SYSTEMS

Existing parking apps operate in silos with no physical IoT occupancy sensing, no guaranteed advance reservations, and no driver-to-driver resolution tools

✅ MYMOVE SOLUTION

One Integrated Platform for Live IoT Vacancy Sensing & Private Move Coordination

- **Live Spot Detection:** Smart sensors stream real-time parking space availability in under 1.5 seconds.
- **Hassle-Free Booking:** Reserve your spot ahead of time with instant confirmation and secure in-app payment.
- **No-App Anonymous Chat:** Scan a car's windshield QR code to contact the driver immediately while keeping phone numbers 100% private.

Why It Works Out

Comparative feature matrix against major existing commercial parking systems in Malaysia

Key Capabilities & Features	Touch 'n Go	JomParking	Flexi Parking	myMove (Proposed)
Real-Time IoT Hardware Sensor Updates				
Guaranteed In-Advance Spot Reservation				
Anonymous QR Driver-to-Driver Chat				
Blocked-Car Photo Proof & Move Request				
Emergency SOS Panic Trigger Overlay				
Real-Time Admin Web Telemetry Portal				

Pilot Study

Survey validation across Malaysian drivers proving critical demand for hardware sensing and privacy chat

REAL-TIME IOT

DEMAND LIVE SPOT UPDATES BEFORE
ARRIVING AT CAR PARKS

myMove Architecture

End-to-end BaaS ecosystem connecting physical edge sensors, cloud databases, and client apps

01

1. IoT HARDWARE LAYER

ESP32 Microcontroller + HC-SR04 ultrasonic sensors measure distance (<10cm threshold) with debounce filtering and self-healing reconnect loops

02

2. CLOUD BaaS LAYER

Firebase Realtime Database synchronizes live sensor state updates in <1.5s; Cloud Firestore manages atomic bookings and user records

03

3. DRIVER MOBILE APP

Cross-platform Flutter application providing interactive slot reservation, Stripe card payment, live countdown timers, and SOS panic triggers.

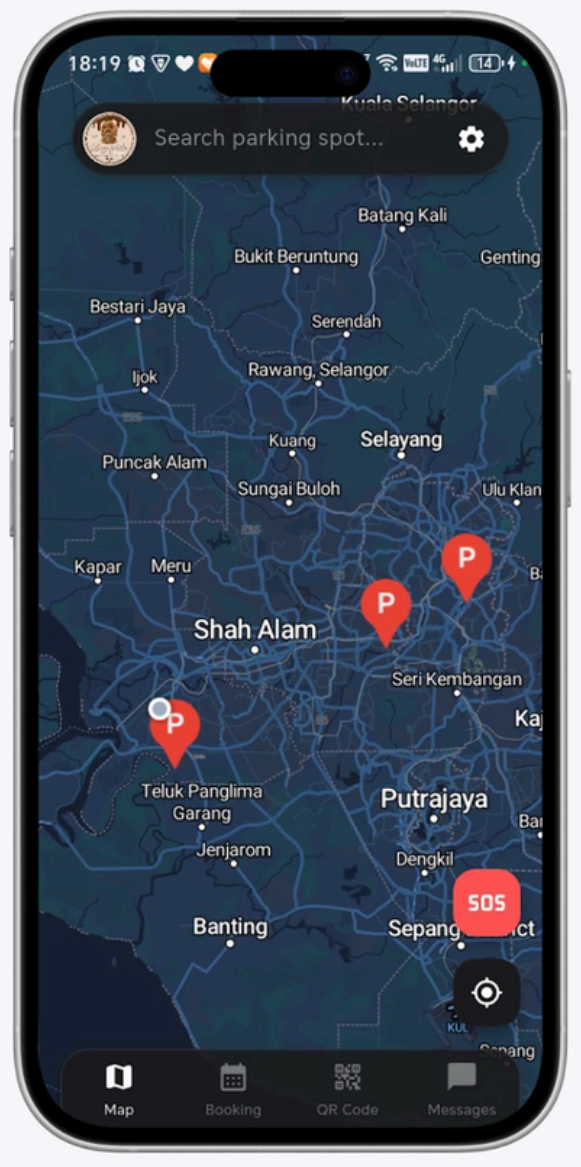

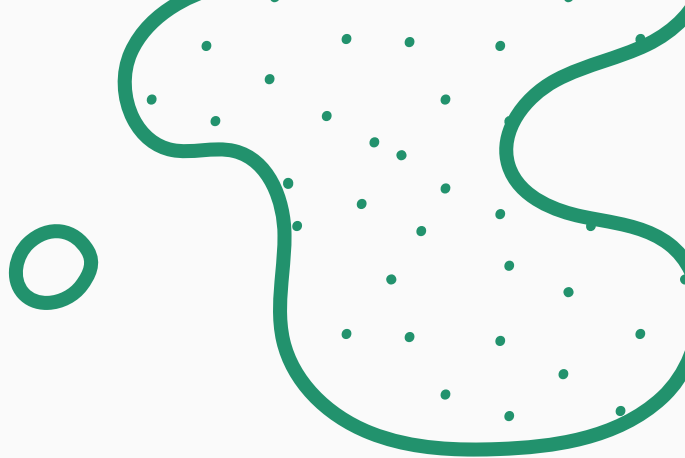

04

4. WEB ECOSYSTEM

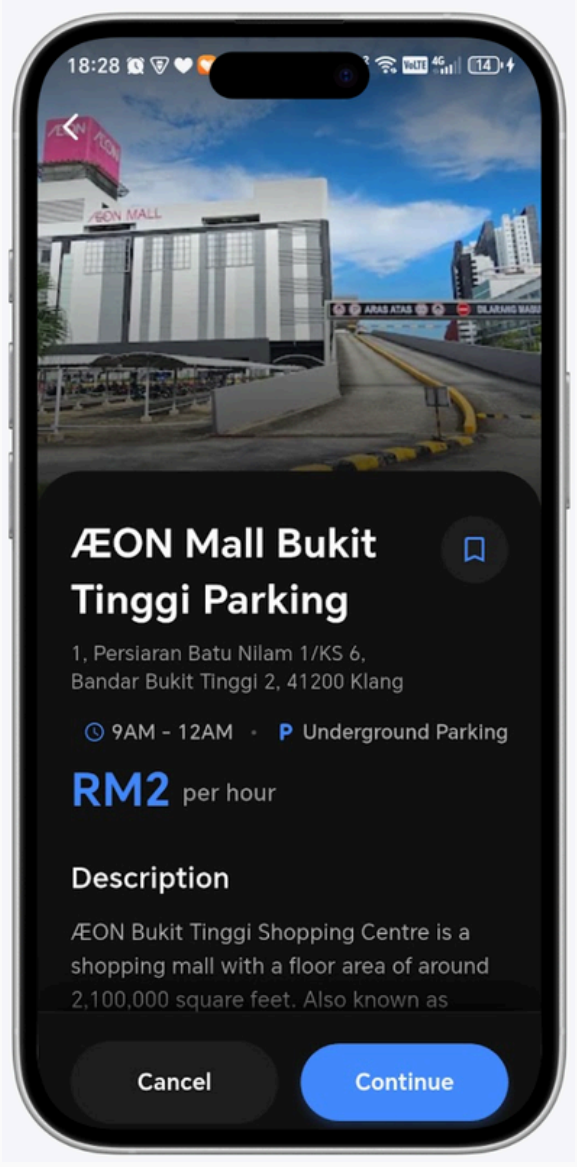

React + Vite Admin Dashboard for occupancy telemetry; Zero-install lightweight Web-Guest Scanner for blocked drivers.

DRIVER MOBILE APP – DEMO

Smart tools. Seamless reservations. Total privacy.

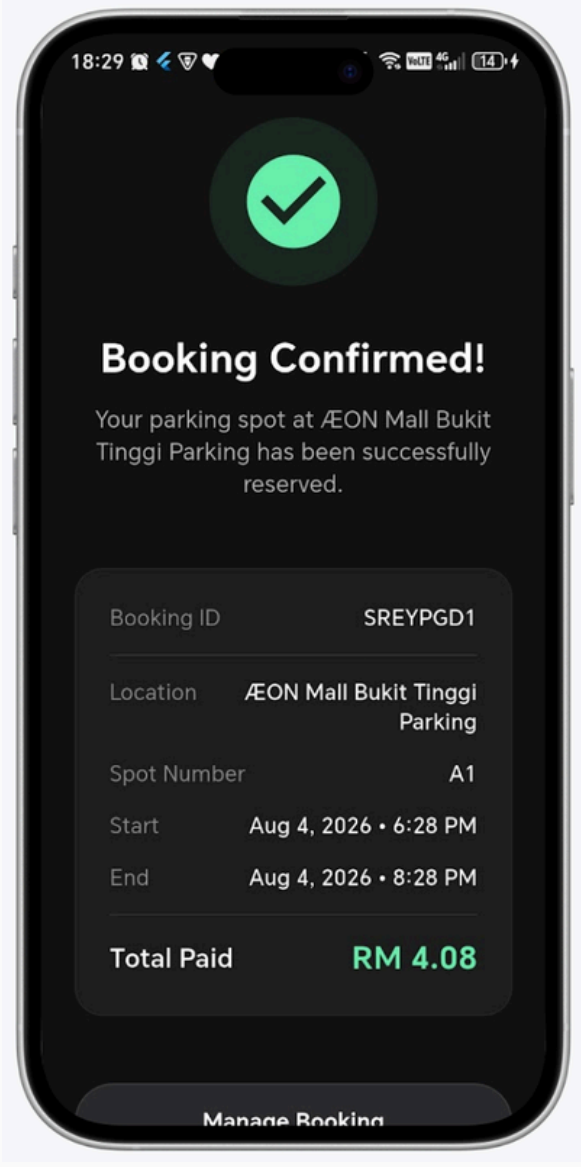

HOME & MAP

PARKING DETIALS

LIVE SPOT GRID

ACTIVE BOOKING

QR CODE SCAN

ADMIN OPERATION WEB - DEMO

Centralized facility management, real-time occupancy telemetry, and emergency dispatch

FACILITY & SPOT MANAGEMENT

Configure parking facilities, define parking zones, set dynamic hourly tariffs, and override spot states manually

REAL-TIME TELEMETRY & REVENUE

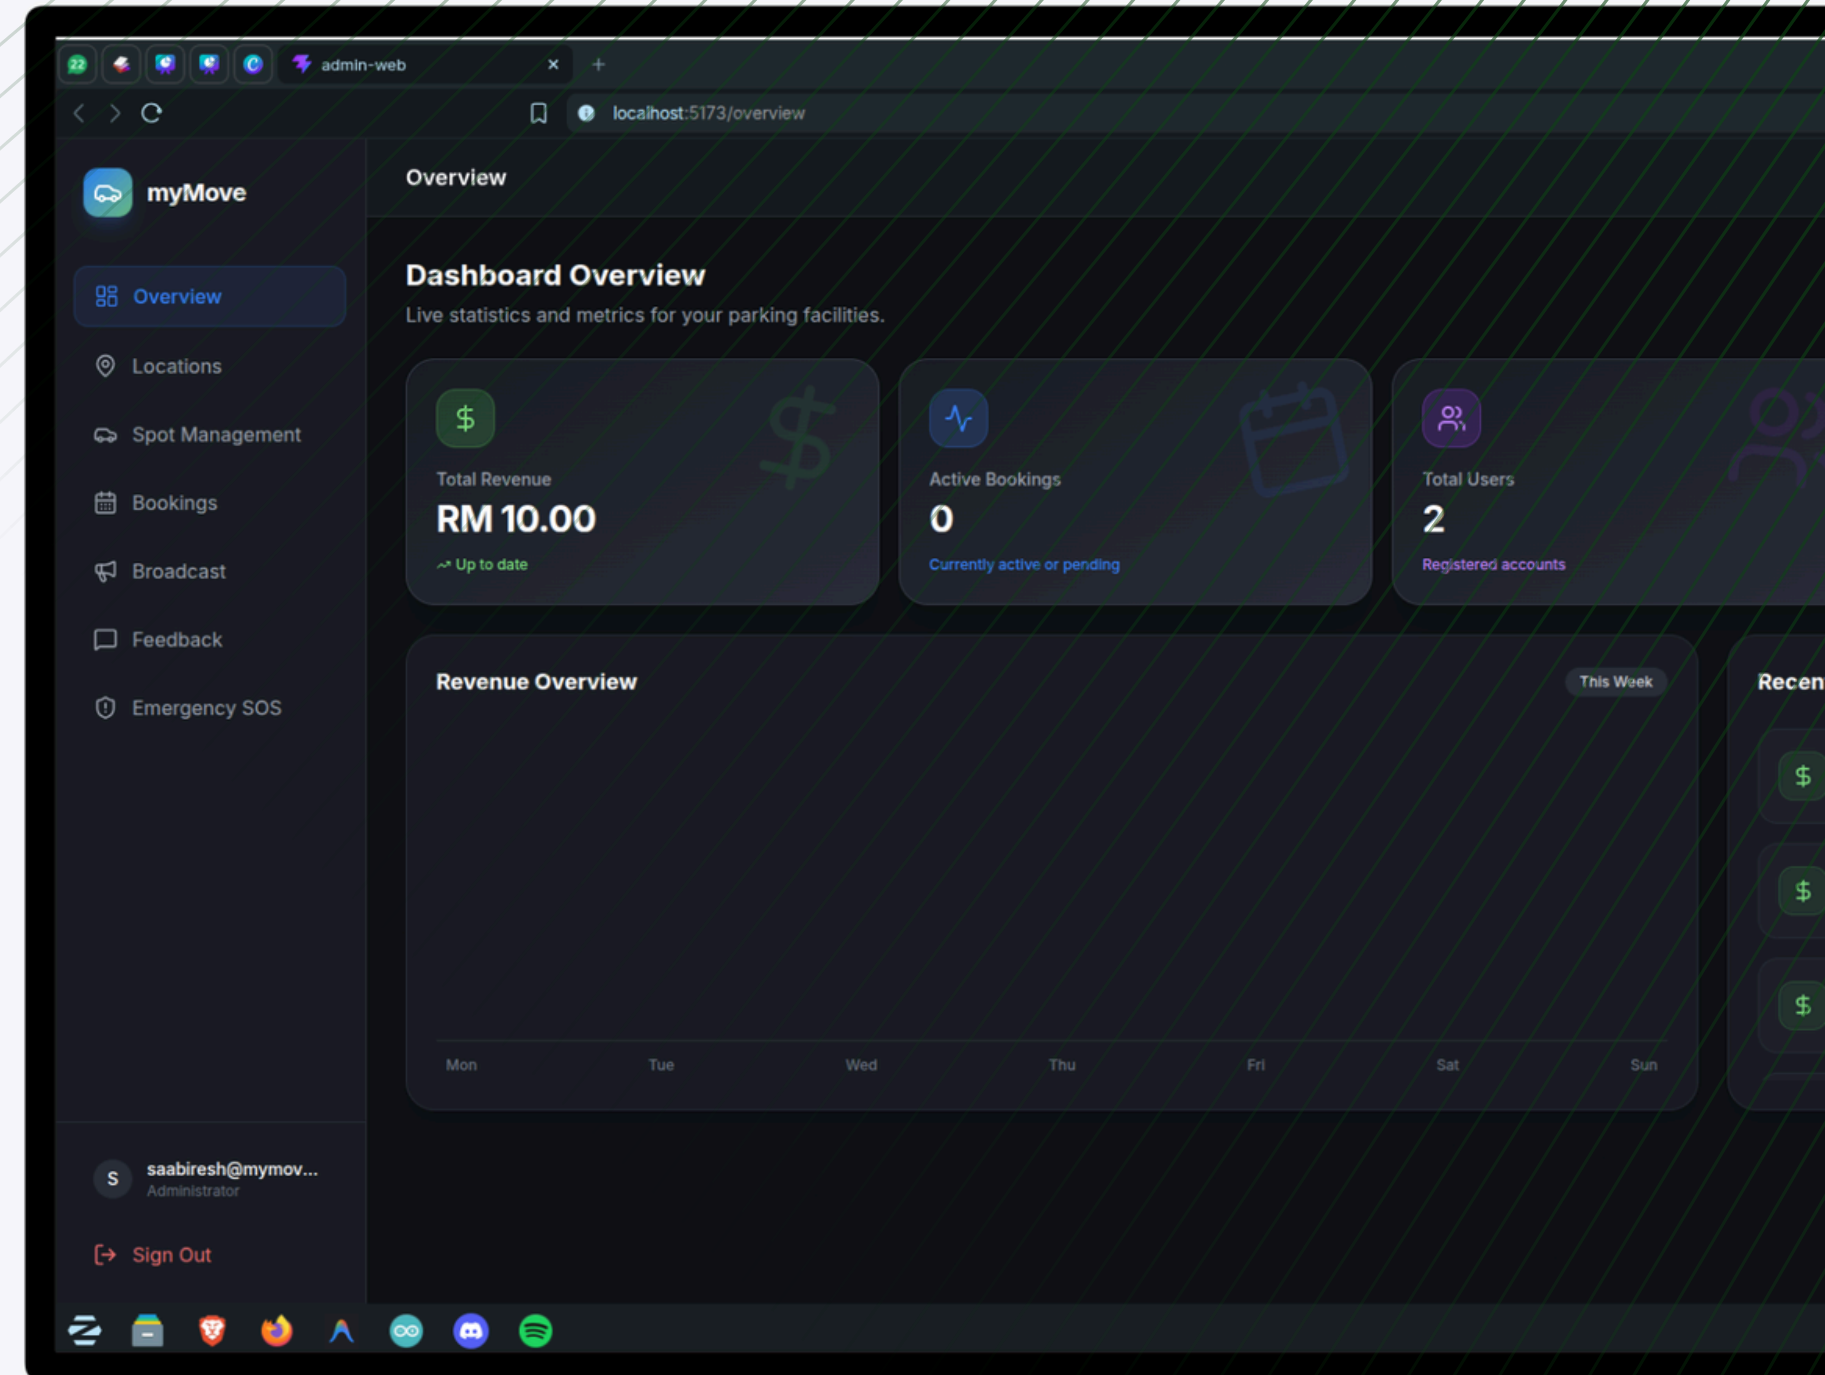

Live charts showing hourly occupancy peaks, weekly gross revenue, and total customer reservation volume.

EMERGENCY SOS CONSOLE

Dedicated visual/auditory panic hub alerting on-site security personnel instantly with driver GPS coordinates.

SYSTEM-WIDE PUSH BROADCASTS (NOTIFICATION)

Instantly dispatch facility announcements, maintenance closures, or weather warnings to all mobile app users.

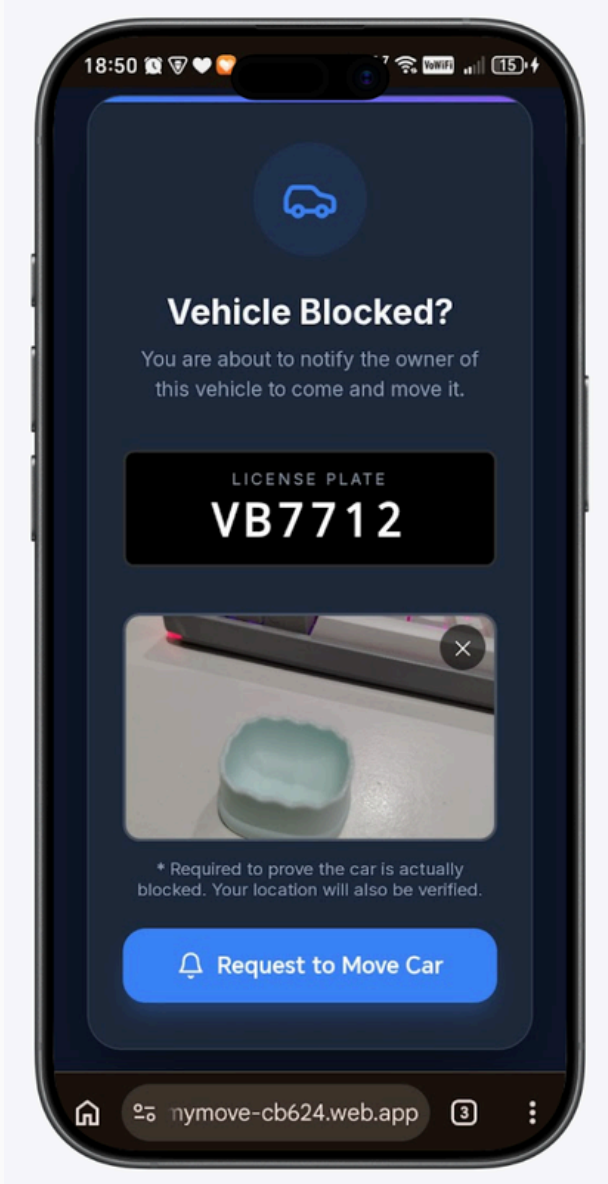

QR CODE PRIVACY VEHICLE – DEMO

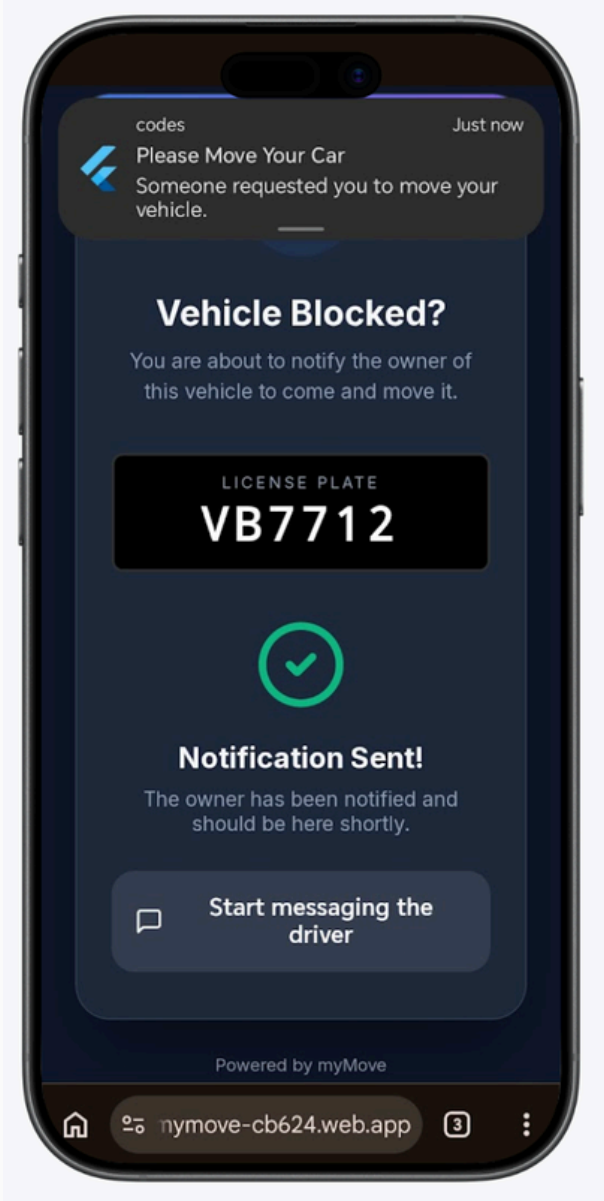

Zero app installation for guest drivers – 100% privacy protection for registered vehicle owners
